Onexar PAMM Account Policy

Overview:
A **PAMM (Percentage Allocation Money Management) Account** is a **profit-sharing model**, where an investor allocates funds to a professional trader.

Key Points:

- **How It Works:**
  - Investors allocate **capital** to a PAMM trader.
  - The trader manages all funds **as a single pool**, executing trades on behalf of all investors.
  - Profits/losses are **distributed proportionally** based on individual contributions.

- **Investor Benefits:**
  - No need for active trading—**let professionals trade for you**.
  - Investors can track **performance statistics** before allocating funds.
  - Profits are withdrawn **based on predefined agreements**.

- **Risk Warning:**
  - PAMM trading **does not guarantee profits**, and losses are shared based on capital allocation.
  - Investors should review **trader history and risk profiles** before investing.
